

hocol

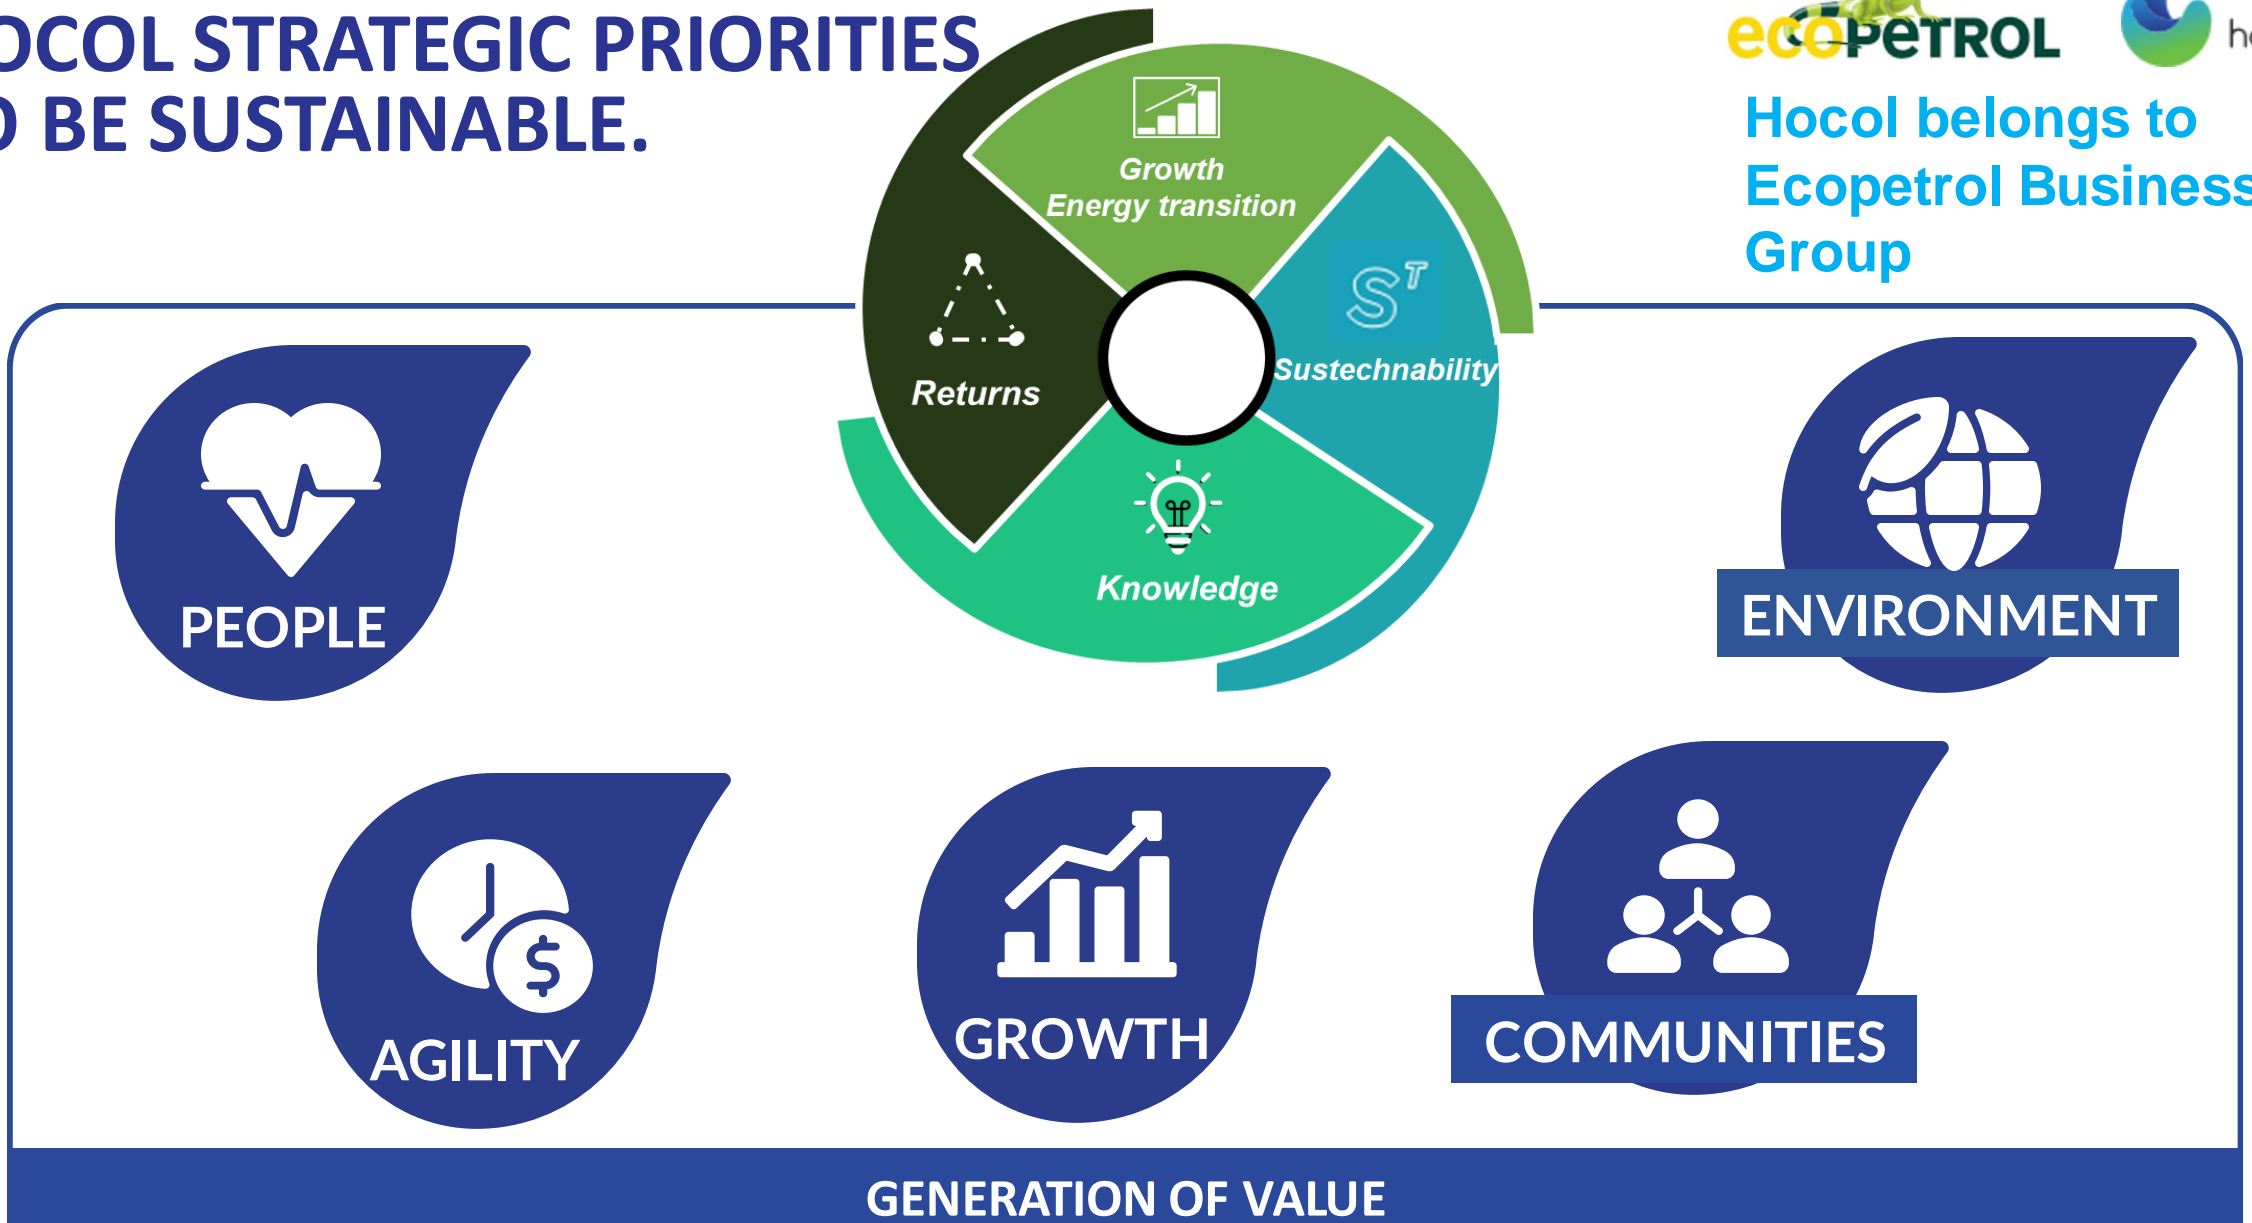

**Making smart decisions for
an asset, integrating models
achieving efficient and
sustainable operations for
HOCOL**

September 21-23th / 2022

Lucerne - Switzerland

HOCOL STRATEGIC PRIORITIES TO BE SUSTAINABLE.

Hocol belongs to Ecopetrol Business Group

BENEFITS OF APPLYING INTEGRATED MODELS

 **INCREASE RESERVES** Up to 10%
RF: 80%

 **ANALYSIS & SENSITIVITIES** Unlimited full integrated model with insights all variables

 **DIGITAL TRANSFORMATION** Use Big Data & Cloud

 **PRODUCTIVITY INCREASE** Full cycle analysis reduces 80% of manpower time.

 **CONNECTIVITY & TEAM WORK** Integration Reservoir, Wells & Facilities

 **EMISIONS REDUCTION** Zero CO2 emissions Arjona Case

PROJECT SCOPE - WHAT ARE WE EXPECTING?

GAS ASSESTS IN HOCOL, COLOMBIA

Chuchupa

Ballena

Bonga

Mamey

Arjona

Reservoir Modeling + Wells & Networks

Mamey

Bonga

PETREL

INTERSECT

ECLIPSE

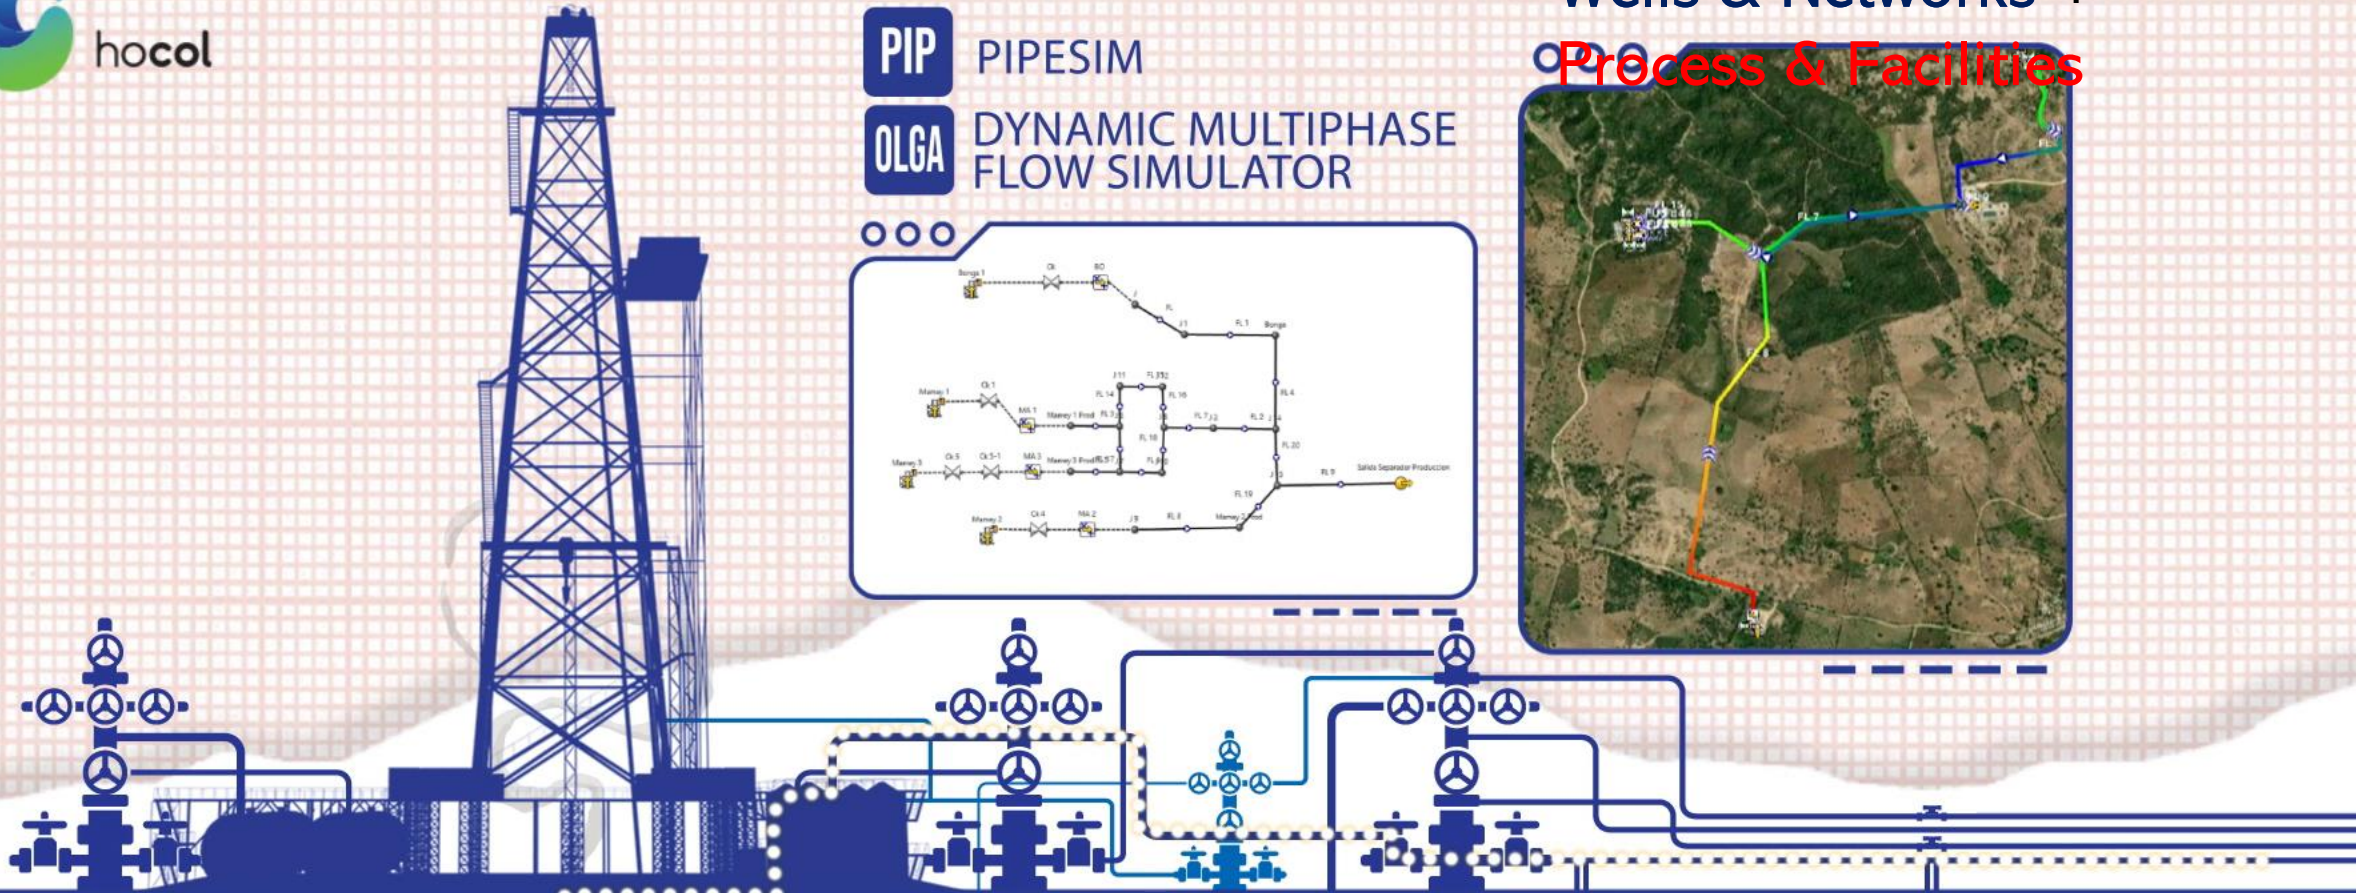

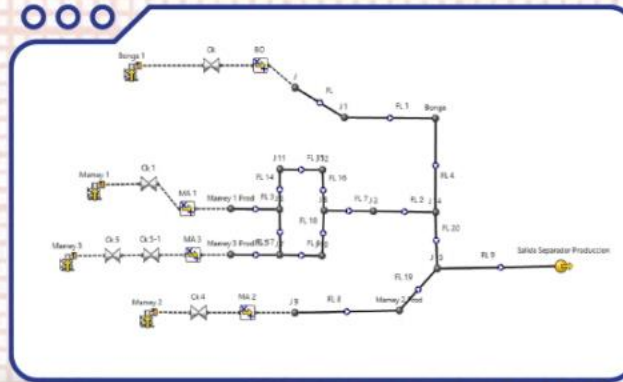

OIL FIELD MANAGEMENT

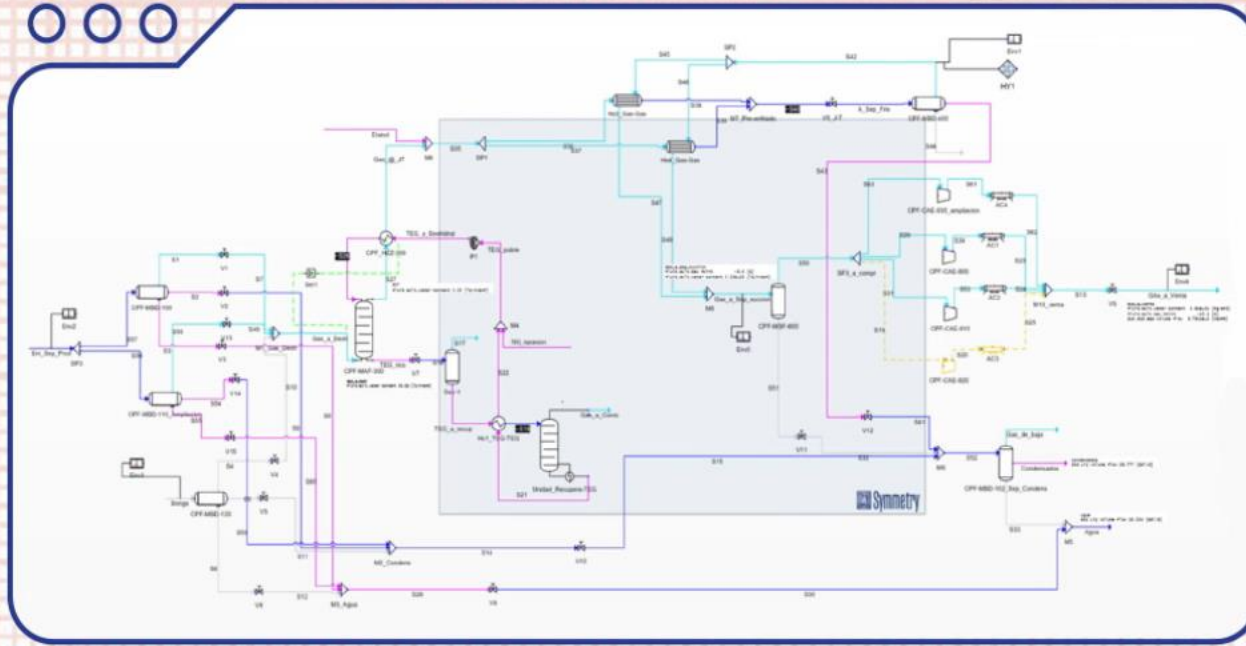

Reservoir Modeling +
Wells & Networks +
Process & Facilities

PIP PIPESIM
OLGA DYNAMIC MULTIPHASE
FLOW SIMULATOR

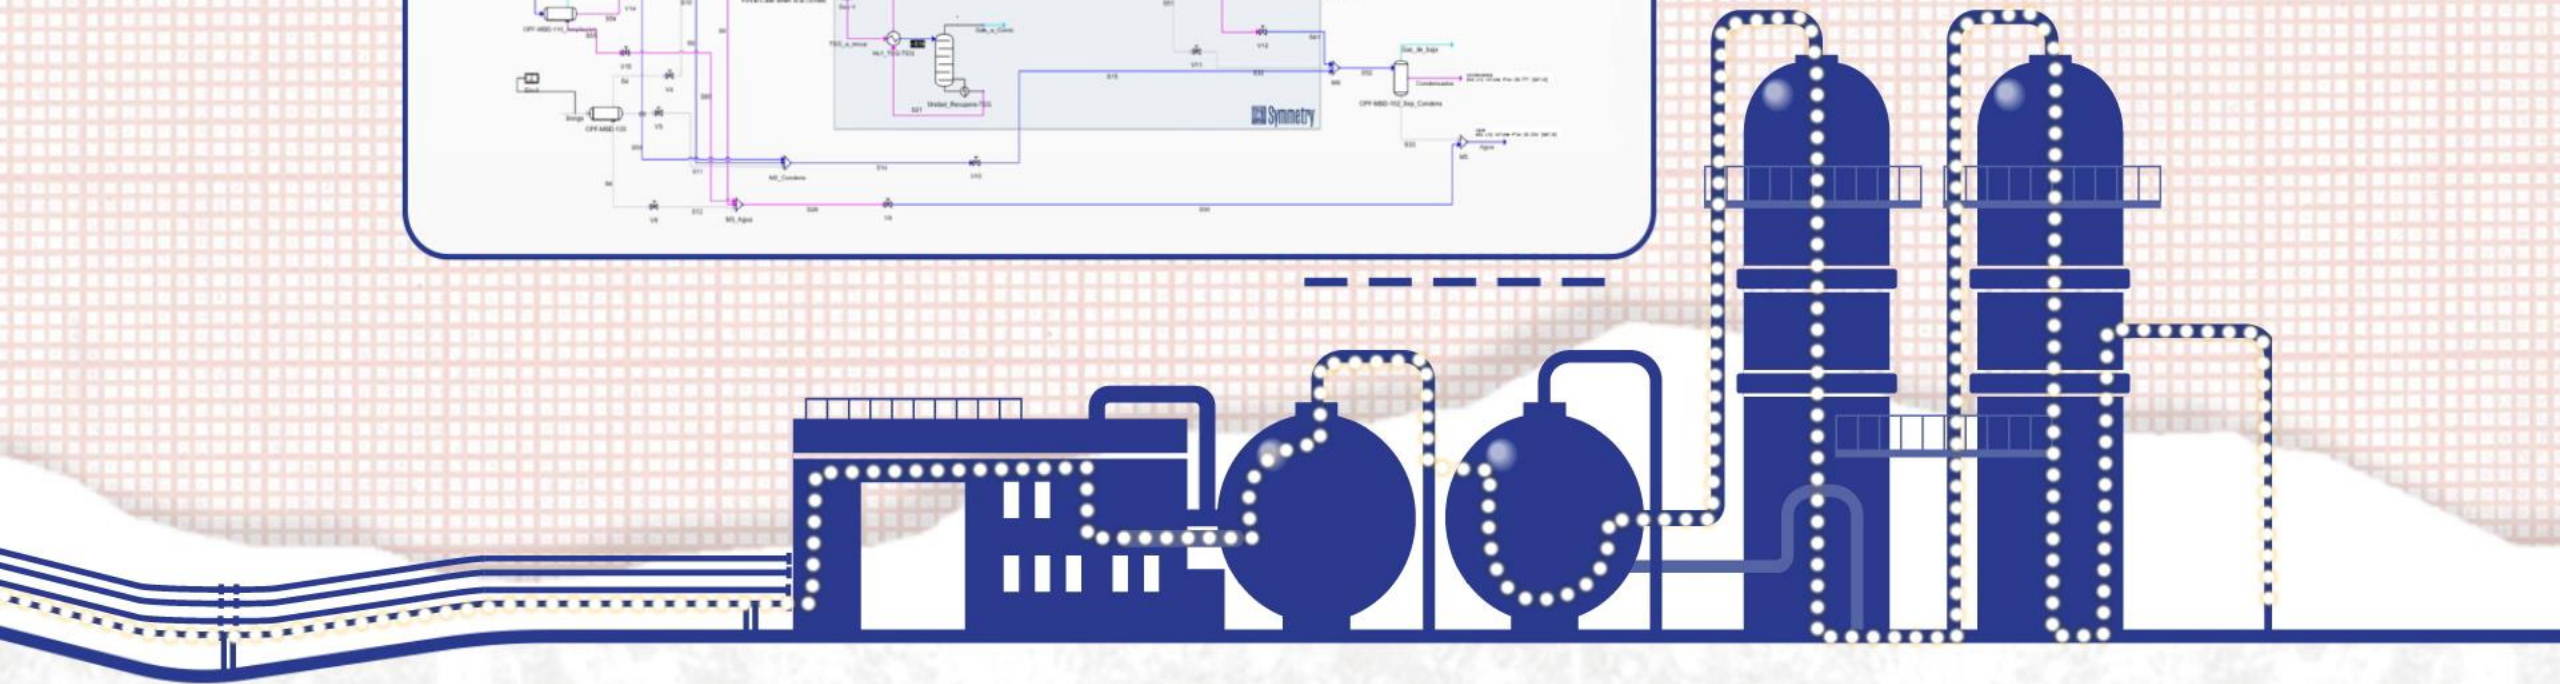

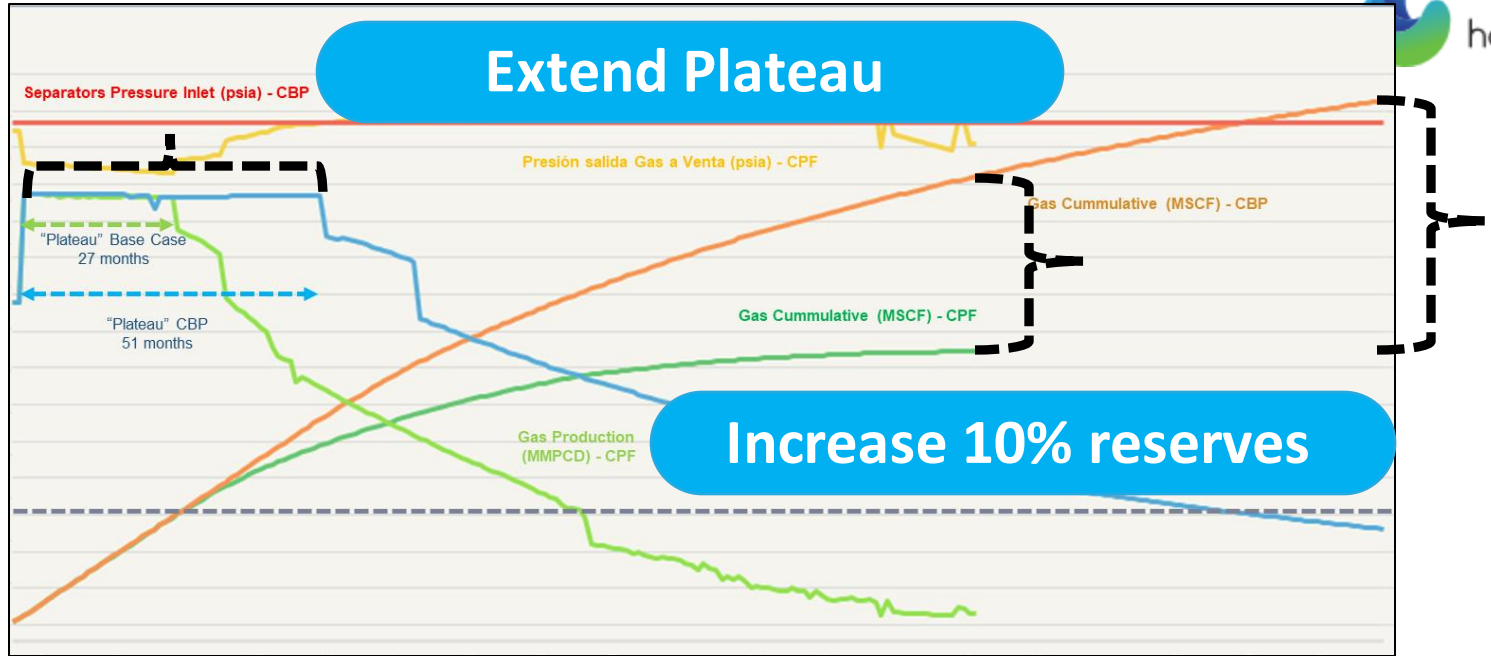

Integrated model complete with IAM

SYMMETRY PROCESS SOFTWARE PLATFORM

PRODUCTION PROFILES

WELL BEHAVIOUR: LIQUID LOADING PREDICTION

(LLVR > 1) Critical rate to unload Water

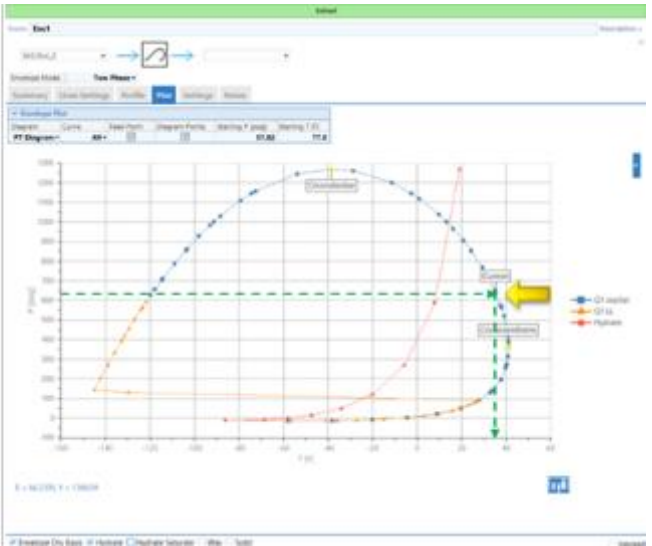

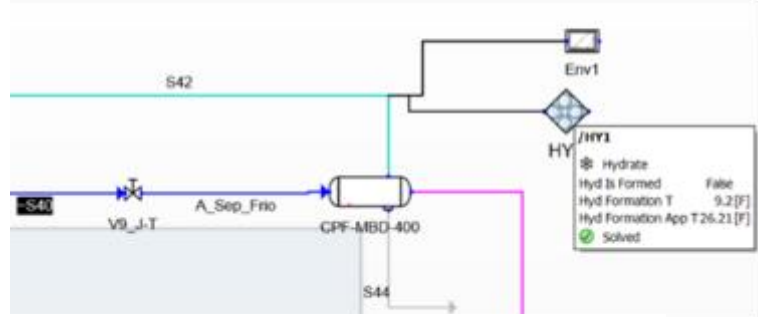

FLOW ASSURANCE

Use integration model to avoid solid formation & minimize pressure drop.

Solids Formation

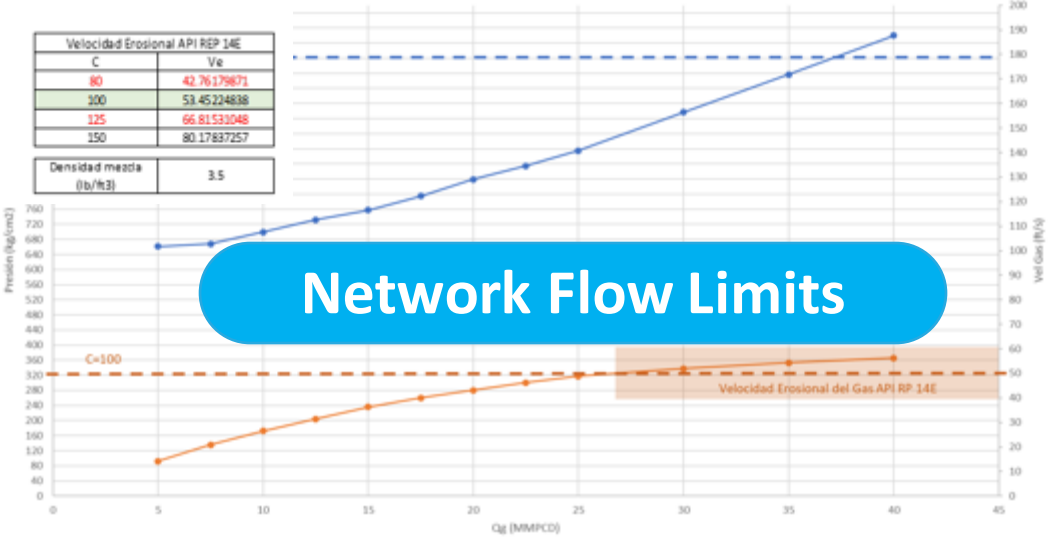

For a sand-free, two-phase flow situation, the C factor is limited to 100 for continuous flow and 125 for intermittent flow. The API RP14E recommends the use of a lower unspecified C factor for fluids containing sand.

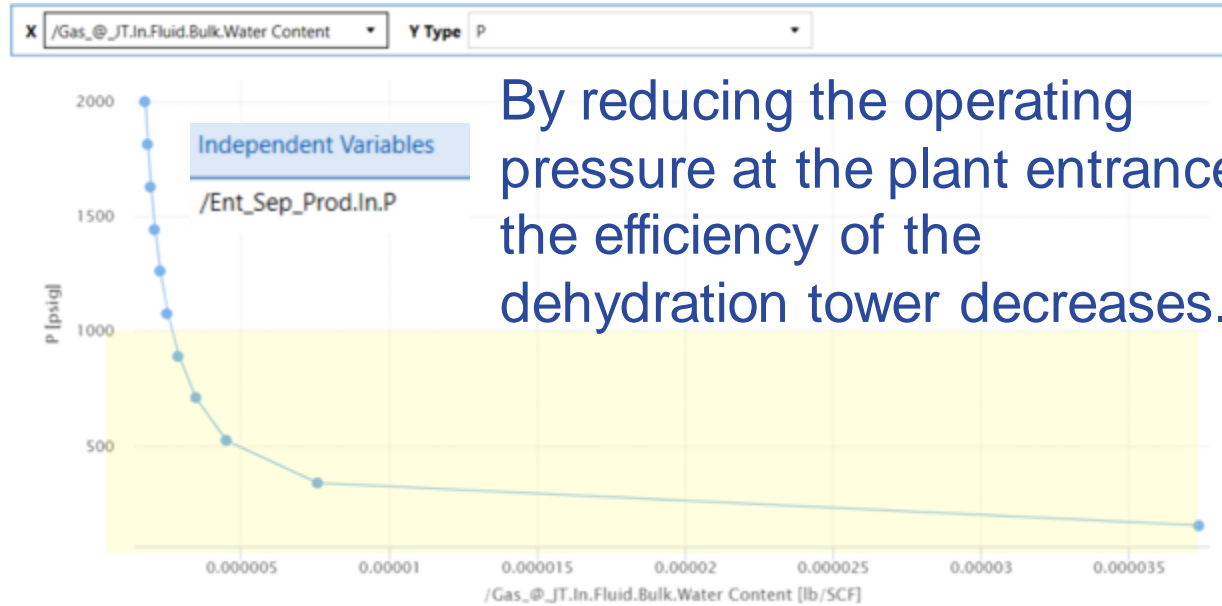

Velocidad Erosional API REP 14E	
C	Ve
80	42.76179671
100	53.45224838
125	66.81532048
150	80.17837257

Densidad mezcla (lb/ft ³)	3.5
---------------------------------------	-----

FACILITIES LIMITATIONS

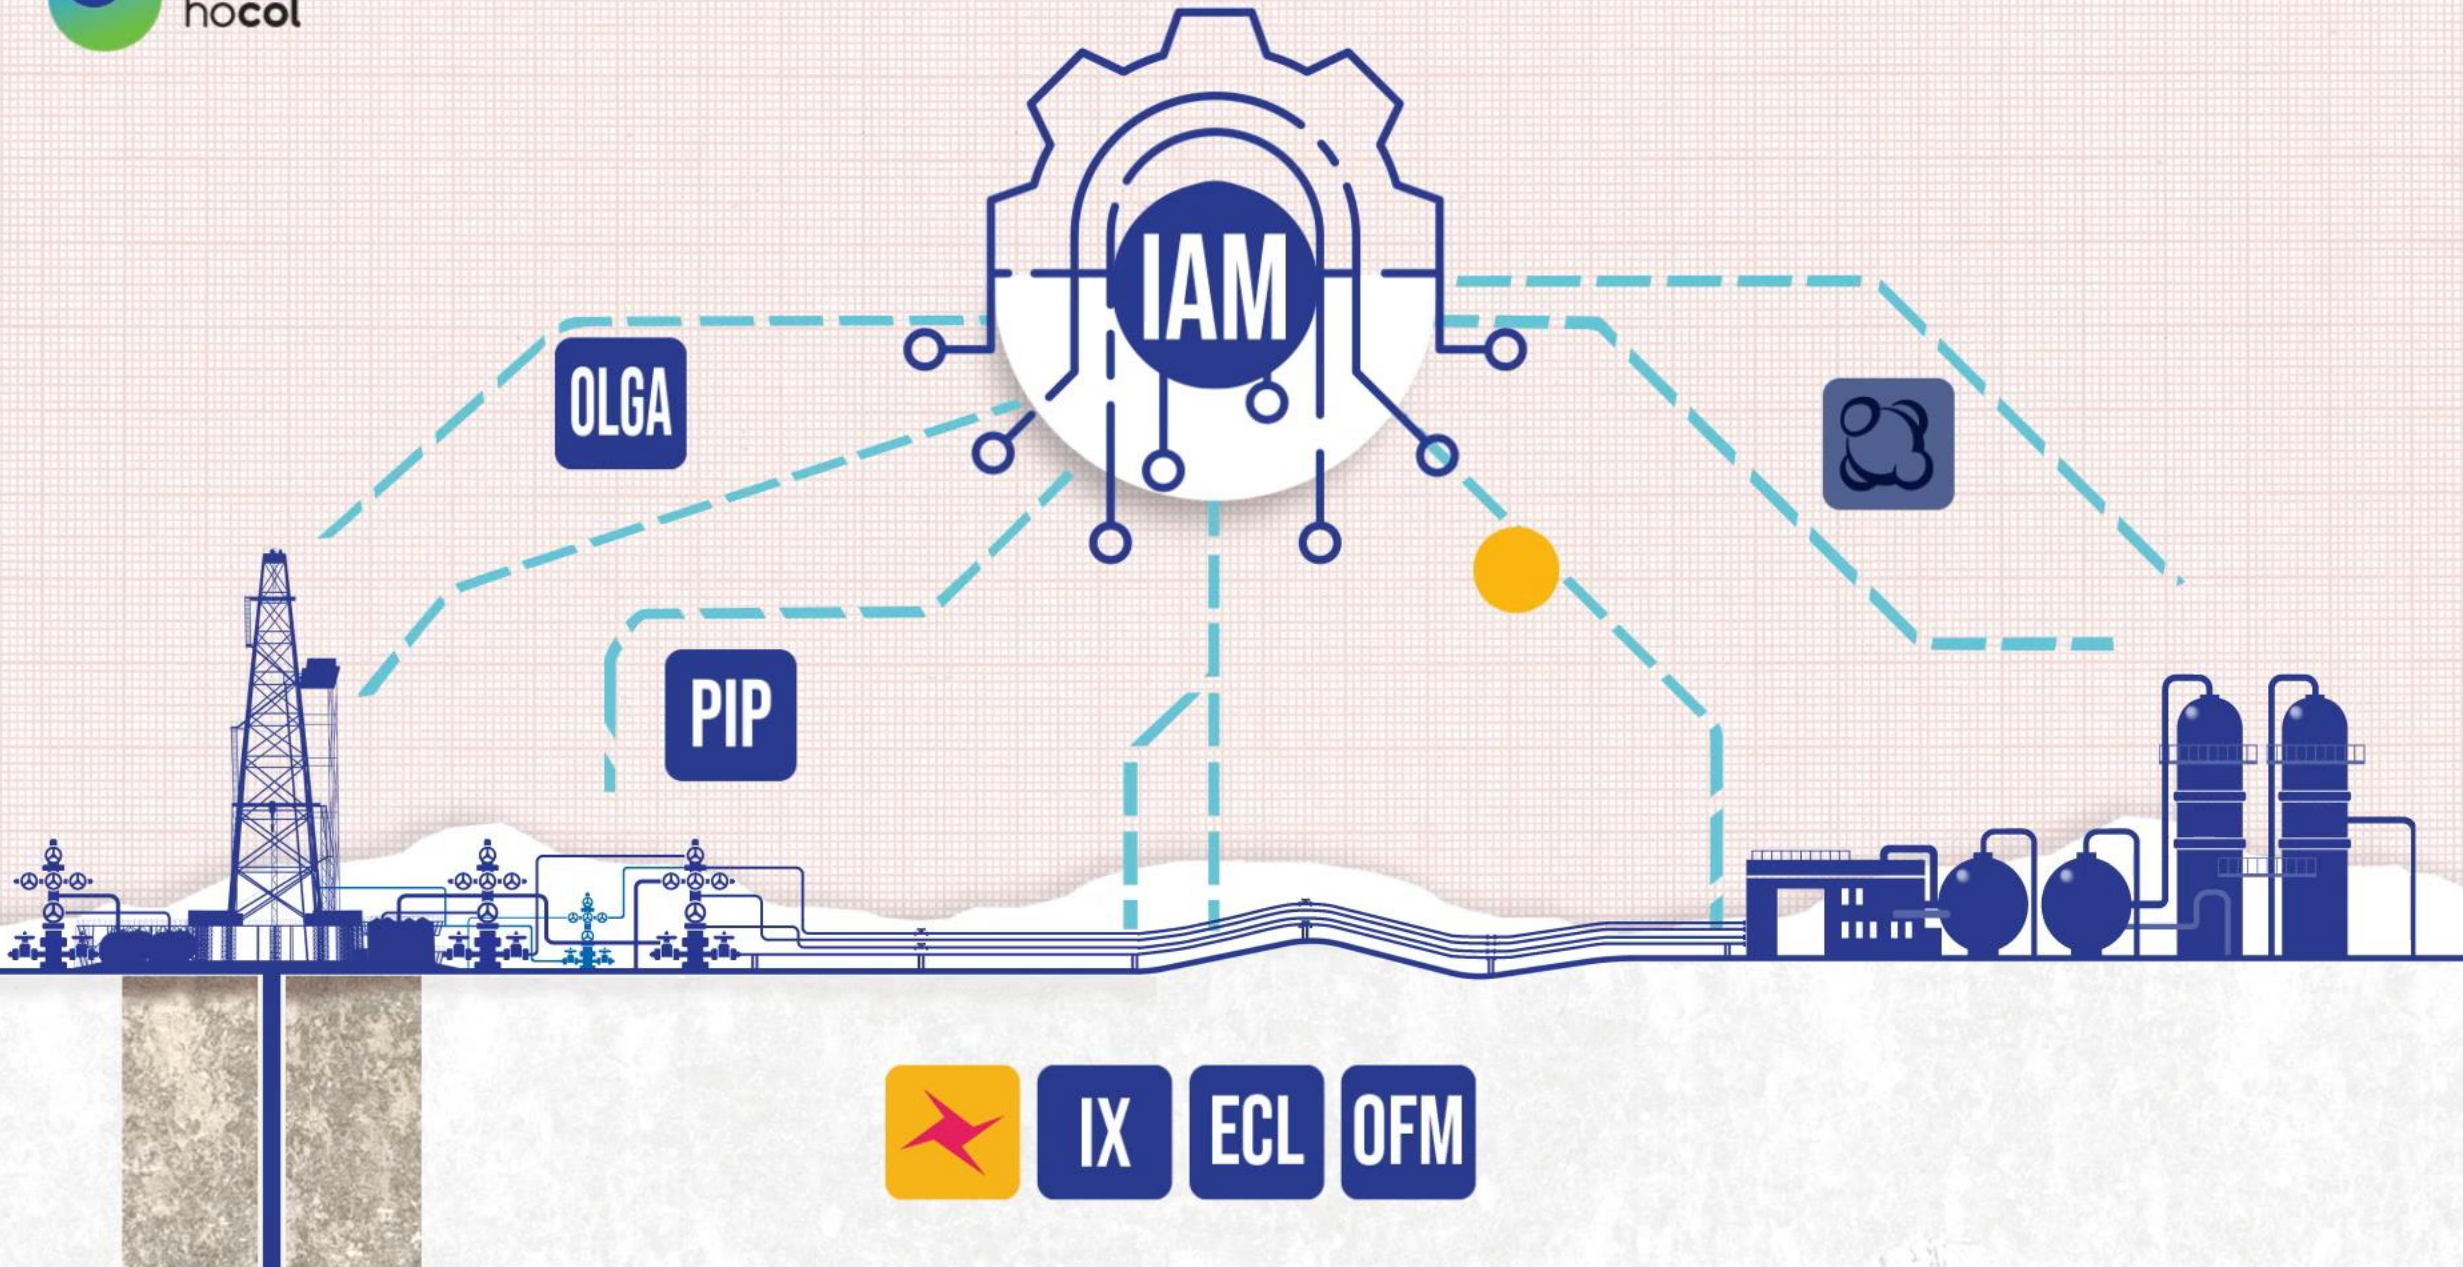

Facility adjustment optimization to ensure product conditions

By reducing the operating pressure at the plant entrance, the efficiency of the dehydration tower decreases.

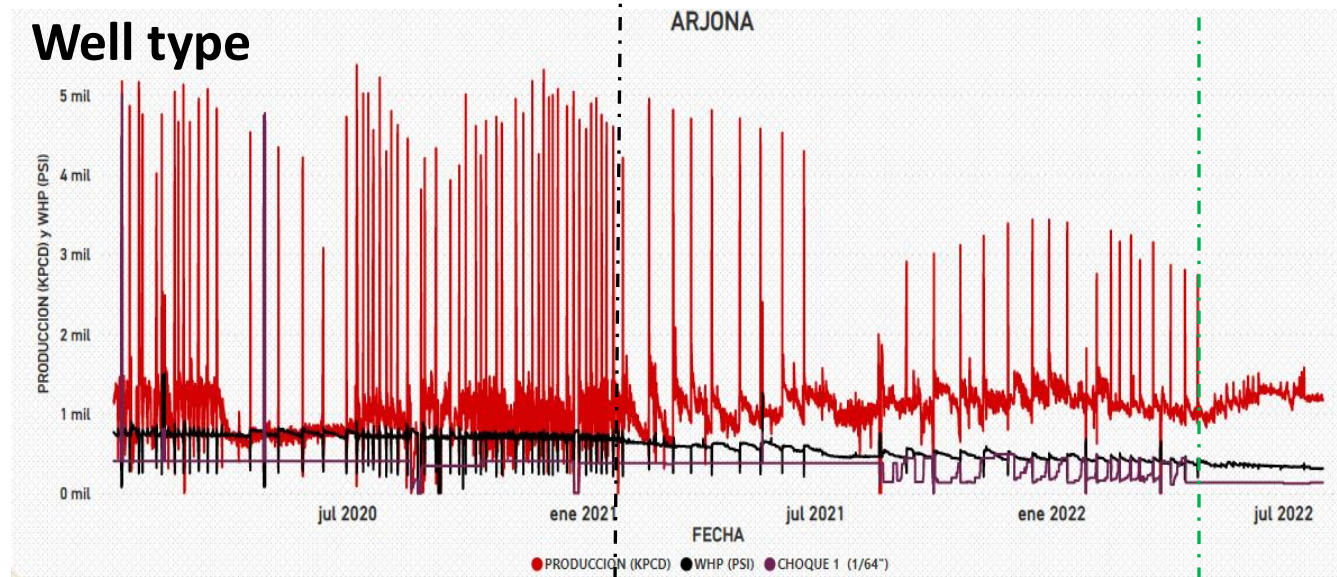

As the inlet pressure to the production separator decreases, an increase in the water content is observed in the gas stream towards the J-T process and in the gas for sale.

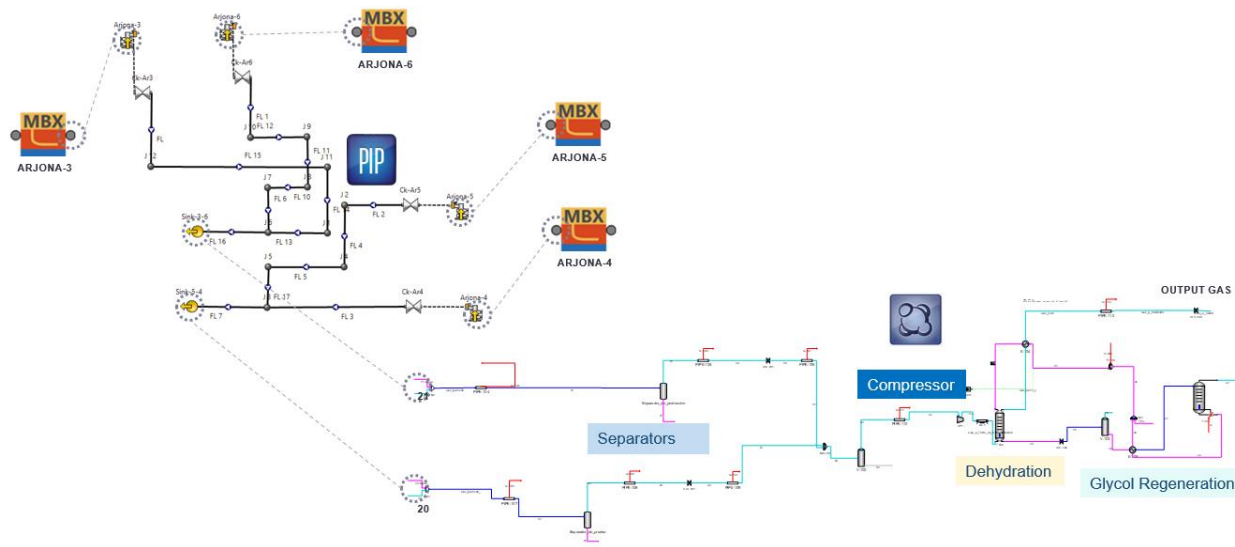

EMISSION CO2 REDUCTION

Dewatering Flaring Reduction

EMISSION CO2 REDUCTION

Dewatering Flaring Reduction

Cummulative Emissions [TonCO2e] Arjona Field

NEXT STEPS

ENVIRONMENTAL TASKS

- Energy savings strategies
- Carbon footprint reduction
- Create new products from production processes wastes.
- End-to-end emissions solutions (SEES).

VISUALIZATION AND KNOWLEDGE SHARE

- Improve dashboards visualization.

IT REQUIREMENTS

- Include IAM in (DELFI) environment. Faster & high-performance models.

PRODOPS INTEGRATION

- Automate real data with ProdOps ML/AI algorithms.
- Include FDP planner to evaluate economical decisions.
